Replacement Parts

The Ethics of Procuring and Replacing Organs in Humans
Arthur L. Caplan, James J. McCartney, and Daniel P. Reid, Editors
360 pp. Hardcover

In *Replacement Parts*, internationally recognized bioethicist Arthur L. Caplan and coeditors James J. McCartney and Daniel P. Reid assemble seminal writings from medicine, philosophy, economics, and religion that address the ethical challenges raised by organ transplantation.

Caplan's new lead essay explains the shortfalls of present policies. From there, book sections take an interdisciplinary approach to fundamental issues like the determination of death and the dead donor rule; the divisive case of using anencephalic infants as organ donors; the sale of cadaveric or live organs; possible strategies for increasing the number of available organs, including market solutions and the idea of presumed consent; and questions surrounding transplant tourism and "gaming the system" by using the media to gain access to organs.
